

ABSTRACT OF THE DISCLOSURE

A detachable connection of two elements, includes a bolt, or shaft, arranged between the two elements detachably connected, and a tensioning body for fixing the bolt at one end to one element of the two elements. The tensioning body is rotatable relative to the one element about an axis extending substantially perpendicular to the bolt, with the tensioning body being fixed in any rotational position relative to the bolt. A retaining head for fastening the bolt to the tensioning body is included, with the retaining head being rotatable about an axis that is distanced from the axis of the tensioning body and substantially parallel thereto. The retaining head is detachably attached to the bolt and is rotatable relative to the tensioning body.
